## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11 and 21-25, drawn to a method and apparatus for gathering and analyzing data, classified in class 73, subclass 105.
  - II. Claims 12-20, drawn to a method of performing an elasticity analysis of a atomic force data file, classified in class 73, subclass 81.

The inventions are distinct, each from the other because of the following reasons:

Inventions I (claims 1-11) and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all of the limitations of Group II are not found in Group I. The subcombination has separate utility such as a method of performing an elasticity analysis of a sample using an atomic force microscope.

Inventions I (claims 21-25) and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice

another materially different process, such as a process for indenting a sample and solving a model of contact mechanics using an indentation depth to obtain a result.

2. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
